1. Which API is considered the "native API" for Azure Cosmos DB? *

○   MongoDB API

○   Cassandra API

○   NoSQL API

    ✔ **That's correct. The NoSQL API is the native API for Azure Cosmos DB. All other APIs map to the NoSQL API in their implementations.**

2. Which property is required to be specified when creating a new Azure Cosmos DB for NoSQL container? *

○   Partition key path

    ✔ **That's correct. All containers in an Azure Cosmos DB for NoSQL database must have a partition key path defined.**

○   Time-to-live

○   Indexing policy

3. Your team has an existing Azure Cosmos DB account, database, and container. A new team member would like to configure Azure Cosmos DB for a different team with unique needs for regional replication and default consistency levels. Which new resource should that member of the team create? *

○   Container

○   Account

    ✔ **That's correct. In order to have different behavior for replication and default consistency, your team member must create a new account.**

○   Database
